

Our Team ...

The META E²F team:

9 employees in the logistics department

- process
- hundreds of quotations,
 - all purchase orders from customers,
 - all necessary orders placed with suppliers each year.

Around 55 staff members in our manufacturing department

- produce, test and package
- a total of 1.5 million finished products (over 3,500 different ones)
 - from over 15,000 different parts
 - in our 1,800 sqm production and storage area.

We work as a closely knit team

- and use
- innovative production equipment,
 - modern IT systems and high-performance software,
 - a lean organization and certified QM system

to ensure that

- customer requirements in terms of design, product quantity and delivery deadlines are satisfied with a high level of flexibility,
- products are manufactured correctly, on schedule and at fair market prices.

Unique qualities and strengths

- High level of commitment and dedication
- Open-minded approach and high flexibility
- Polite and professional attitude towards customers and suppliers
- Openness to criticism and willingness to constantly improve, both internally and externally
- Strong team spirit and close cooperation with customers

... and that's far from all!

Development

Whether it's a prefabricated stranded wire, electronic assembly or finished electrical device - we are there to help you realise your ideas in ready-to-use hardware. we are at your side with help and advice.

- Component and material selection,
- implementation in the layout,
- development of components and assemblies these are our strengths.

Your products are documented on 2D/3D mechanical and modern electronic CAD stations.

We combine many years of experience in development with manufacturing expertise. The result are cost effective and with high quality producible final products, which fulfil their function with high reliability.

META E²F today

- We are Your established development and manufacturing partner for electrical engineering/electronics.
- We attach great importance to our speed, flexibility and reliability.
- Small and medium quantities are our strength.
- We have the relevant production technologies in-house.
- Modern technology - hardware and software - supports us in production and organisation.

- Our customers come from many branches of industry, but not directly from the automotive industry.
- We also have large customers, but mostly with a turnover share of no more than 20%.
- Although we prefer to work regionally, we have an export share of approx. 10 - 15%.

- Our employees are the basis of our company. A pleasant working atmosphere, flexible working hours, good working conditions and, last but not least, appropriate pay ensure the loyalty and high performance of our employees.
- A flat hierarchy, co-operation instead of subordination, role models instead of demands are important principles of our success.

- Our suppliers are our partners; we want good material at the right time and on favourable terms. That's why we have time for them and deal with them openly and fairly.

- People and the environment are important to us. We adhere to international conventions as well as laws. We respect and tolerate religious denomination, gender, race and nationality, but also expect the same from others.

Production

We have a wide range of manufacturing technologies at our disposal. We can produce your electrical product either completely or as a component, depending on your requirements.

The key technologies are

- Electronics production,
- Cable assembly,
- electrical assembly.

In-house technologies

- SMD and THT assembly, stencil and inkjet paste printing, 2 Mycronic SMD lines
- Vapour phase, selective and full wave soldering systems - Asscon, Ebso, Seho
- Automatic and semi-automatic optical inspection - Göpel, Mirtec, EFA
- Several functional testing equipment
- Flying probe tester Spea 4040
- Polyurethane moulding systems, hotmelt systems
- Conformal coating of assembled pcbs
- Riveting and punching technology, Ultrasonic welding of housings
- CO₂ laser for labelling/decoding/engraving
- Semi-automatic cable and strand cutting and stripping technology
- 5 KMI stripper crimpers, semi-automatic crimpers, more than 100 crimping tools
- Processing range from AWG30 to 95²
- 2 automatic cable testers for various cables and ribbon cables

META E²F products

- Assembled pcbs according to customer specifications with / with partial or without material provision
- Customised products
Rectifiers, current regulators, switching devices for electromagnets
Seat heating control for motorbike seat
Phase angle control for vibrators and motors
Full bridge control for rotary solenoid
Valve controls 24-48 VDC, 20 to 230VAC

- Cable assemblies according to customer specifications
- Customised cable assemblies
- Switch box production and assembly

- UL/CSA approved Cable assembly
- UL manufacturing partner for electronics production
- ATEX manufacturing partner with certificate of conformity
